

AXIAL FANS

AXIAL FANS

FAN RANGE GUIDE

Introducing a range of high quality propeller and axial aerofoil fans suitable for HVAC and industrial applications where reliability and performance are non-negotiable criteria.

Propeller fans are presented in four sizes, 300, 380, 450, and 600mm and are available in a variety of speeds and voltages.

The following choices are available in the axial aerofoil category:

- HDA** - High efficiency, low noise levels, heavy duty aluminium impellers, 13 sizes from 315 to 2000mm diameter
- LDA** - Light weight, economical, light duty aluminium impellers, 6 sizes from 400 to 1250mm diameter
- LDP** - Light duty glass reinforced nylon blades with aluminium hub, 5 sizes from 400 to 1120mm diameter

These impellers all have adjustable pitch type blades and can be supplied in various formats to suit your installation type, namely, cased axials for ducted systems, bifurcated fans for high temperature or other industrial applications where the motor should be kept out of the airstream, plate axials for partition type installations, portable man coolers for your mobile cooling requirements, and roof units for through the roof installation.

Motor enclosures with various degrees of protection against water or dust ingress, or suitable for hazardous locations or high temperature applications complete the range.

Performance curves based on testing to International Test Standard ISO 5801 September 1997 and BS 848 Part 1, 1963 are available from our sales outlets.

ACCESSORIES

A full range of accessories including sound attenuators, mounting feet, inlet cones, flexible connectors, dampers, wire guards, and fibreglass weather cowls compliment this range of fans.

Due to continuous efforts to improve the design of our products, the information contained in this publication may have changed since going to print.
